

GEOHART is a Geotechnical Consultancy specialising in the following areas:

- Borehole supervision and field logging
- Geotechnical logging of core and inclusion of core data
- Instrumentation and monitoring for groundwater and slope stability
- Groundwater sampling and monitoring
- Laboratory testing of samples

GEOHART Consultants are in the business of providing an efficient Geotechnical, Hydrogeological, Geomechanical and Drilling and Blasting consulting service through innovation and experience for mining and civil engineering projects. Geohart has experience in water sampling and groundwater monitoring projects.

Geohart provides a full range of geotechnical engineering, environmental, hydrogeological and mining geotechnical services, incorporating;

- Groundwater resource evaluation using well and aquifer testing, and hydrogeological techniques
- Groundwater quality monitoring
- Groundwater contamination assessment and remediation
- Mine water management
