

GEOHART is a Geotechnical / Geological Consultancy specialising in the following areas:

- Geological Investigation / Exploration
- Geological Data Recovery / Exploration
- Geological and Geotechnical information interpretation
- Open Cut Mine Slope Stability Assessments (e.g. High & Low Walls and Waste Dumps)
- Instrumentation and monitoring for groundwater
- Underground / Surface Mining Geological / Rock Mechanics Reviews

Geological / Geotechnical investigation in Queensland

Areas of expertise include:

- Structural Geological Solutions
- Supervision of rotary percussion and diamond drilling programmes
- Core logging and sampling
- Identification of exploration targets
- Underground and Open Cut Mine Structural Geology

Our key personnel have played a critical role in the design and analysis of geological structures in many exploration and mining projects in Australia, Mongolia and Peru (South America). Dr Vanadis Mares, our

Geological Consultant, has more than 20 years experience in solving structure related geological problems and understands the complexity of drilling contracts.

Dr. Vanadis Mares in Mongolia

One of our unique specialties is our strong geological modelling skills, which cover geological structural interpretation of underground and open pit mines. This special capability is required to provide a proper design of underground and open cut mines.
